Release Note

Cimatron 15

Table of Contents

Hardware Requirements	1
Memory (RAM) / Processor:.....	1
Graphics Card:	1
3 Button Mouse.....	1
Software Requirements.....	2

Hardware Requirements

The hardware requirements for installing Cimatron are as follows:

Memory (RAM) / Processor:

Minimum: 16 GB RAM, 4 cores

Recommended: 32 GB RAM, 6 cores i7 (i7-6850K)

Note: To gain better I/O performance, it is recommended using a solid state hard Drive (SSD). Windows and Cimatron should be installed on the SSD. The file management should be configured on a different hard drive, local or network based.

Graphics Card:

Quadro cards from NVidia and FireGL/FirePro cards from ATI are the most recommended cards for CAD/CAM software.

The performance of graphics cards is tightly related to driver version and memory size. The newer the driver and the greater the memory, the better the graphics card performance.

For recommended graphics cards see the following website:

<https://cimgraphics.3dsystems.com/>

The graphics card must support OpenGL 3.3:

Minimum: 1 Gb of memory

Recommended: 2 Gb of memory

3 Button Mouse

Software Requirements

The software requirements for installing Cimatron are as follows:

The following Windows operating systems are supported:

Recommended:

- Windows Server 2008, 2012, 2016 or 2019.
- Windows 10, Professional/Ultimate Edition.

Note: .NET Framework 4.6.2 is an installation prerequisite. If this is not installed, it is automatically installed during the Cimatron installation process.

Not supported:

- Windows 7, 8 and 8.1 are no longer supported, however, Cimatron will still run on them.
- Windows versions older than Windows 7 are not supported.

Internet Explorer 9 or higher must be installed.
